

Rapid Bond **FlexaMix™** by

The first and only truly sustainable starch mixing system in North America

Key Features:

Environmentally Friendly:

FlexaMix™

- A truly sustainable mixing system capable of utilizing 100% flexo & corrugator wastewater for starch preparation
- Less energy use achieved with lower storage & gel temperatures
- Reduced starch consumption

Fully Automatic Viscosity Detection & Control:

FlexaMix™

- Guarantees consistent batch-to-batch viscosities
- Provides easily selectable, specific, batch viscosity
- Improved corrugator efficiency

Hybrid Mixing Technology:

FlexaMix™

- Allows for production of starch to meet your production requirements
- Improved bonding on difficult substrates
- Less dependence on starch modifiers and additives
- All using native pearl starch
- Faster corrugator speeds
- Improved stability

Major Components:

Manufactured with Premium Hardware Components:

FlexaMix™

- OSHA compliant
- Allen-Bradley PLC controls
- Stainless steel mixing tank, deck, valve assemblies, pipes & hoses
- Fully automatic mixing system
- Dual high shear mixing blades
- High-grade enamel coated steel frame modular construction
(Optional stainless steel frame & enclosure)

Quick Return On Investment (ROI):

FlexaMix™

- Many corrugating facilities see a quick return on investment (ROI); on average, in less than two years

Proven Technology:

FlexaMix™

- Currently used in over 200 corrugator facilities worldwide
